

# OUTDOOR lighting

## How LEDs Work

Old outdoor lights work by creating an electric arc through vaporized metals, wasting some of the energy as heat. Those lights also require a warm-up time of up to 10 minutes.

LEDs are a completely new technology without these disadvantages. They use a semiconductor to extract photons that give off light. LEDs come on instantly when you flip the switch.

# GOOD OUTDOOR LIGHTING ENHANCES SAFETY

## Advantages

- Colors look much truer under an LED light.
- LEDs are energy efficient.
- Our LED outdoor lights focus their beam to the ground, putting more light where it's needed.
- LEDs can last more than 100,000 hours –that's 30 years or longer!
- Some of our lights even repair themselves if they malfunction.

Law enforcement professionals agree – criminals prefer to work under the camouflage of darkness. Good outdoor lighting destroys their habitat.

According to the National Institute of Justice, improving outdoor lighting can reduce crime.

It's also proven that traffic accidents go down on well-lit roadways.

Outdoor lighting from Walton EMC protects your loved ones and property from all sorts of danger... economically and easily. We install and maintain outdoor lighting for a low monthly fee with no worry.
